

ENERGY CONSERVATION

Background

The District recognizes the importance of the conservation of energy through reduced utility consumption.

Procedures

1. Upon proof of economic viability, fixtures and materials that reduce the consumption of energy shall be used in the construction and renovation of District facilities.
2. Principals and other facility supervisors are to implement programs within their facilities to reduce energy consumption.
3. Principals and teachers are encouraged to develop, where practicable, education programs that increase student awareness of the need for energy conservation.
