## chapter io Accounting for a Merchandising Business

## SECTION IO.I REVIEW QUESTIONS (page 40I)

1. A service business sells a service to the general public but does not deal in merchandise. For example, a law firm is a service business.
2. A merchandising business buys goods and sells them at a profit. For example, a furniture store is a merchandising business.
3. A wholesaler buys goods that it sells to retailers. A retailer buys goods from wholesalers or manufacturers and sells them to the public.
4. The merchandise inventory of a drugstore is the goods for sale on the store shelves and in the storeroom.
5. Another name for merchandise inventory is stock-in-trade (stock for short).
6. The goods available for sale that are not on hand have been sold, lost, broken, or stolen.
7. Merchandise inventory is listed as a current asset on the balance sheet.
8. The cost of goods sold figure is important because it is the largest deduction from revenue for a merchandising business.
9. Gross profit is the difference between the cost price of the goods and their selling price, before deducting any operating expenses.
10. The periodic inventory system is used by businesses that have a large number of inventory items but choose to avoid the high cost of the perpetual system.
11. A small variety store would choose to use the periodic inventory system because is easy to manage and less expensive than the perpetual inventory system.
12. The four steps of the inventory cycle are as follows. One: There is inventory at the beginning of the accounting period. Two: Merchandise is sold and moves out during the period. Three: Merchandise is purchased to replace items sold. Four: The inventory at the end of the accounting period is approximately equal to the inventory at the beginning.
13. The cost of goods sold formula is: Cost of goods sold $=$ Cost of beginning inventory + Cost of merchandise purchased - Cost of ending inventory.
14. It is necessary to take a physical inventory when using the periodic inventory system because the financial statements cannot be prepared without an accurate count and value of the ending inventory for an accounting period.
15. Gross margin is also called the gross profit.
16. Margin is a percentage of the selling price while markup is a percentage of the cost price.
17. A limitation of the periodic inventory system is that financial statements cannot be accurately prepared unless the inventory is counted and valued.
$\qquad$

SECTION IO.I EXERCISES (page 402)

## Exercise I, p. 402

| Selling Price | Cost Price | Gross Profit | Cost of Goods <br> Sold as a \% of <br> Selling Price | Gross Profit <br> as a \% of <br> Selling Price <br> (Margin) | Gross Profit <br> as a \% of <br> Cost Price <br> (Markup) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\$ 250$ | $\$ 150$ | $\$ 100$ | $60 \%$ | $40 \%$ | $67 \%$ |
| $\$ 125$ | $\$ 85$ | $\$ 40$ | $68 \%$ | $32 \%$ | $47 \%$ |
| $\$ 80$ | $\$ 56$ | $\$ 24$ | $70 \%$ | $30 \%$ | $43 \%$ |
| $\$ 150$ | $\$ 75$ | $\$ 75$ | $50 \%$ | $50 \%$ | $100 \%$ |
| $\$ 300$ | $\$ 195$ | $\$ 105$ | $65 \%$ | $35 \%$ | $54 \%$ |
| $\$ 225$ | $\$ 162$ | $\$ 63$ | $72 \%$ | $28 \%$ | $39 \%$ |
| $\$ 90$ | $\$ 54$ | $\$ 36$ | $60 \%$ | $40 \%$ | $67 \%$ |
| $\$ 500$ | $\$ 350$ | $\$ 150$ | $70 \%$ | $30 \%$ | $43 \%$ |
| $\$ 200$ | $\$ 130$ | $\$ 70$ | $65 \%$ | $35 \%$ | $54 \%$ |
| $\$ 250$ | $\$ 120$ | $\$ 130$ | $48 \%$ | $52 \%$ | $108 \%$ |

## Exercise 2, p. 402

A.

|  | Year I | Year 2 | Year 3 |
| :--- | :--- | :--- | :--- |
| Beginning inventory | 100 units | 300 units | 200 units |
| Merchandise purchased | 700 units | 900 units | 650 units |
| Goods available for sale | 800 units | 1200 units | 850 units |
| Merchandise sold | 500 units | 1000 units | 800 units |
| Ending inventory | 300 units | 200 units | 50 units |

B. Cost of Goods Sold

| Beginning Inventory | $\$ 1000$ |
| :--- | ---: |
| Purchases | $+\quad 3250$ |
|  | $\$ 4250$ |
| Ending Inventory | $-\quad 250$ |
| Cost of Goods Sold | $\$ 4000$ |
|  |  |

## SECTION IO.I EXERCISES (continued)

## Exercise 3, p. 402

|  | Sales | Beginning <br> Inventory | Purchases | Ending <br> Inventory | Cost of <br> Goods Sold (\$) | Gross Profit <br> $\mathbf{( \$ )}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1. | $\$ 125000$ | 32000 | 74250 | 33500 | 72750 | 52250 |
| 2. | $\$ 750585$ | 85600 | 410360 | 88300 | 407660 | 342925 |
| 3. | $\$ 288635$ | 65550 | 110357 | 60548 | 115359 | 173276 |
| 4. | $\$ 174000$ | 33800 | 82640 | 33500 | 82940 | 91060 |
| 5. | $\$ 255324$ | 48500 | 150650 | 50300 | 148850 | 106474 |

## Exercise 4, p. 403

Cost of Goods Sold

| Beginning Inventory | $\$ 14500$ |
| :--- | :---: | ---: |
| Purchases | $+\quad 41300$ |
|  | $\$ 55800$ |
| Ending Inventory | $-\quad 15600$ |
| Cost of Goods Sold | $\mathbf{Y} \$ 40200$ |

## Exercise 5, p. 403

LONDON RETAILERS
INCOME STATEMENT
MONTH ENDED JUNE 30, 20-

| Revenue |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sales |  |  |  |  |  | \$55 | 3 | 2 | 5 | - |
| Cost of Goods Sold |  |  |  |  |  |  |  |  |  |  |
| Beginning inventory | \$24 | 5 | 0 | 0 |  |  |  |  |  |  |
| Purchases | 18 | 5 | 7 | 5 |  |  |  |  |  |  |
| Cost of Goods Available for Sale | \$43 | 0 | 7 | 5 | - |  |  |  |  |  |
| Less Ending Inventory | 25 | 3 | 5 | 0 | - |  |  |  |  |  |
| Cost of Goods Sold |  |  |  |  |  | 17 | 7 | 2 | 5 | - |
| Gross Profit |  |  |  |  |  | \$37 | 6 | 0 | 0 | - |
| Operating Expenses |  |  |  |  |  |  |  |  |  |  |
| Advertising Expense | \$ | 5 | 0 | 0 | - |  |  |  |  |  |
| Car Expense |  | 7 | 5 | 0 | - |  |  |  |  |  |
| Rent Expense | 1 | 0 | 0 | 0 | - |  |  |  |  |  |
| Utilities Expense |  | 9 | 0 | 0 | - |  |  |  |  |  |
| Wages Expense | 4 | 7 | 5 | 0 | - |  |  |  |  |  |
| Total Operating Expenses |  |  |  |  |  | 7 | 9 | 0 | 0 | - |
| Net Income |  |  |  |  |  | \$29 | 7 | 0 | 0 | - |

## SECTION I O.2 REVIEW QUESTIONS (page 406)

1. The final inventory figure is included on the balance sheet because it is an asset and all assets are included on the balance sheet.
2. The cost of goods sold figure is determined for inclusion on the income statements by using the cost of goods sold formula. This formula normally requires a count of inventory on hand.
3. The two accounts in the general ledger where merchandise inventory is recorded are Merchandise Inventory and Purchases.
4. During the fiscal period, the balance in the Merchandise Inventory account represents the value (at cost) of the inventory at the beginning of the fiscal period.
5. The merchandise inventory is valued at cost prices.
6. The full title of the Purchases account is Purchases of Merchandise for Resale account.
7. This is the accounting entry for the purchase of merchandise for resale on account.

|  | Dr | Cr |
| :--- | :---: | :---: |
| Purchases | $\$ \$ \$ \$$ |  |
| HST Recoverable | $\$ \$ \$ \$$ |  |
| Accounts Payable |  | $\$ \$ \$ \$$ |

8. This is the accounting entry for the purchase of a delivery truck for cash.

|  | $D r$ | $C r$ |
| :--- | :---: | :--- |
| Trucks | $\$ \$ \$ \$$ |  |
| HST Recoverable | $\$ \$ \$ \$$ |  |
| Bank |  | $\$ \$ \$ \$$ |

9. In the ledger of a merchandising business, the revenue account is usually called Sales.
10. If the periodic inventory system is used, the cost portion of a sale is ignored because there is no way to debit the Inventory account after each sale.
11. Transportation charges on incoming merchandise are recorded in the Freight-in account.

## SECTION IO.2 EXERCISES (continued)

## Exercise 2, p. 407

A. The final inventory figure appears on the $\qquad$ balance sheet and on the $\qquad$ income statement inventory figure nor the $\qquad$ cost of goods sold figure
$\qquad$ is known during the accounting period.
C. The cost of goods sold figure is $\qquad$ calculated $\qquad$ using a formula $\qquad$ _.
D. Merchandise inventory is kept in two accounts. These are $\qquad$ Merchandise Inventory
$\qquad$ and $\qquad$ _.
E. The Merchandise Inventory account
$\qquad$ normally shows the merchandise inventory figure as of the period
F. At the fiscal year-end, the inventory is counted and valued at $\qquad$
G. The Merchandise Inventory account is adjusted $\qquad$ at the end of the fiscal period
H. The $\qquad$ inventory adjustment is the only accounting entry made to the Merchandise Inventory account.
I. Merchandise purchased during the fiscal period is debited to the $\qquad$ Purchases account
$\qquad$ _.
J. The Purchases account is a short form of $\qquad$ purchases of merchandise for resale
K. If merchandise is purchased on account, the account debited is $\qquad$ Purchases
$\qquad$ _.
L. If a tire company purchases office supplies, the account debited is $\qquad$ Office Supplies
$\qquad$ _.
M. For a merchandising business, the Sales account is the $\qquad$ Revenue account
$\qquad$ —.
N. When a business using the periodic inventory system sells goods, there is no accounting entry to record the $\qquad$ decrease in inventory
O. The Freight-in account is used to accumulate $\qquad$ transportation charges on incoming goods

## Exercise 3, p. 408

| Opening <br> Inventory | Purchases | Freight-in | Closing <br> Inventory | Cost of <br> Goods Sold |
| ---: | ---: | ---: | ---: | ---: |
| $\$ 20000$ | 40000 | 5000 | 25000 | 40000 |
| $\$ 29000$ | 50000 | 1000 | 30000 | 50000 |
| $\$ 12000$ | 52000 | 1000 | 15000 | 50000 |
| $\$ 42000$ | 90000 | 8000 | 39000 | 101000 |
| $\$ 50000$ | 100000 | 10000 | 60000 | 100000 |
| $\$ 75000$ | 200000 | 5000 | 80000 | 200000 |

## SECTION IO.3 REVIEW QUESTIONS (page 4।3)

1. The three new accounts that appear on the worksheet of a merchandising company are Merchandise Inventory, Purchases, and Freight-in.
2. The trial balance figure for Merchandise Inventory represents the inventory figure at the beginning of the fiscal period.
3. The trial balance figure for Purchases represents the cost of merchandise purchased during the fiscal period.
4. A physical inventory must be taken and valued before the worksheet for a merchandising business can be completed.
5. To extend the Merchandise Inventory line, the trial balance figure for Merchandise Inventory is written in the Income Statement section, Debit column. Then the closing inventory figure is entered in two places: the Income Statement section, Credit column, and the Balance Sheet section, Debit column.
6. To extend the Purchases line, the trial balance figure for Purchases is written in the Income Statement section, Debit column.
7. To extend the Freight-in line, the trial balance figure for Freight-in is written in the Income Statement section, Debit column.
8. The figures for the Cost of Goods Sold section of the income statement are all found on the worksheet in the Income Statement section.
9. The Cost of Goods Sold section of the income statement is important because the cost of the goods sold is the largest deduction from revenue.
10. The closing entry process is theoretically the same as it was when first introduced. However, a common error at this stage is to forget to include the inventory figures.
11. When recording the first two closing entries, you must be careful to include the inventory figures.
12. As a result of processing the first two closing entries for a merchandising business, the Merchandise Inventory account is adjusted automatically.
13. All the information for the closing entries is found on the worksheet.
14. The total effect of all the closing entries is to adjust the Merchandise Inventory account, to close out all the nominal accounts in the equity section of the ledger, and to bring the Capital account up to date.

## SECTION IO.4 REVIEW QUESTIONS (page 424)

1. When a sale is made on account, a sales invoice is issued.
2. When a sale is made on account and the customer is satisfied, the company expects the customer to send payment for the sales invoice by the specified due date.
3. When a customer is dissatisfied with the merchandise, the customer does not pay the sales invoice and returns the merchandise.
4. To adjust a customer's account downward, a credit invoice is issued.
5. A credit invoice is different from a regular invoice because it reduces the amount a customer owes on account. To distinguish it from a regular invoice, it is often printed in red and has the word Credit printed on it.
6. Another name for a credit invoice is a credit note.

## SECTION IO.4 REVIEW QUESTIONS (continued)

7. Three reasons why companies issue credit invoices are if the goods are unsatisfactory and have been returned, the goods are unsatisfactory but the customer agrees to keep them for a lower price, or if the invoice amount is incorrect and needs to be reduced.
8. This is the accounting entry for issuing a credit note, ignoring tax.

|  | Dr | Cr |
| :--- | ---: | ---: |
| Sales | $\$ \$ \$ \$$ |  |

Accounts Receivable $\$ \$ \$ \$$
9. A cash refund is money paid back to a customer who has purchased merchandise with cash and then returned the merchandise as unsatisfactory.
10. This is the accounting entry for a cash refund, ignoring tax.

|  | Dr | $C r$ |
| :---: | :---: | :---: |
| Sales | $\$ \$ \$ \$$ |  |
| Bank |  | $\$ \$ \$ \$$ |

11. Some businesses keep returns and allowances accounts because they want their financial statements to show how much merchandise is being returned by their customers. This helps $t$ them identify and correct problems with the merchandise and increase sales.
12. A business that keeps a returns and allowances account has its sales data in two accounts, a Returns and Allowances account and a Sales account. A business without a returns and allowances account keeps all its sales data in the Sales account.
13. This is the accounting entry for a credit note of $\$ 100$ for goods returned to the supplier, ignoring taxes.

|  | Dr | $C r$ |
| ---: | :---: | :---: |
| Accounts Payable | $\$ 100$ |  |
| Purchases | $\$ 100$ |  |

14. This is the accounting entry for a credit note of $\$ 100$ for goods returned to the supplier who uses a returns and allowances account, ignoring taxes.

|  | Dr | $C r$ |
| :---: | :---: | :---: |
| Accounts Payable | $\$ 100$ |  |
| Purchases Returns and Allowances |  | $\$ 100$ |

15. On the income statement, Sales Returns and Allowances are deducted from Sales and Purchase Returns and Allowances are deducted from Purchases.

## SECTION IO.4 EXERCISES (page 424)

## Exercise I, p. 424

A. From the point of view of Acadia Equipment and Supply, document 1 is a sales invoice.
B. From the point of view of Cornwallis Construction, document 1 is a purchase invoice.
C. Document 2 is a credit invoice.
D. Acadia Equipment and Supply is the sender of the documents.
E. Cornwallis Construction is the purchaser.
F., G.

|  |  | Cash Refund Slip No. 1075 |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## Exercise 3, p. 426

A.
$\$ 376462.09$
C.
. $\$ 328811.77$
E. $\$ 27356.04$
B. $\qquad$ D. \$186 235.32
F. \$158 879.28
G. Separate returns and allowances accounts would help the management of this company track the amount of goods returned by its customers and sent back to its suppliers. If returns and allowances are excessive, management can identify and fix the problems with their merchandise and ordering policies. This will improve customer and supplier relations and increase profits.

## Exercise 4, p. 426

Mr. Leif is correct that net sales have increased by $20 \%$ but according to data hidden in the Sales account, Sales Returns and Allowances have increased by 1078\% (15 200 $\div$ 1410). This indicates that his customers are unhappy with the merchandise they are purchasing and are returning $16.4 \%$ of it (249 $468 \div 15220$ ). His company is not as successful as he thinks. He needs to address the high number of returns. Mr. Leif should adjust his accounting system by creating a Sales Returns and Allowances account. The amount of returns and allowances would then appear on the income statement and would be more open to analysis. Better business decisions would follow.

## SECTION IO.5 REVIEW QUESTIONS (page 432)

1. A cash discount is a deduction that may be taken off the amount of a bill if payment is made on or before the discount date stated on the bill.
2. Terms of sale are the arrangements a company makes with its customers about when payment is due for its goods or services and whether it offers customers a cash discount for early payment.
3. A business would sell goods COD if it had doubts about the customer's ability to pay for the goods.
4. The buying firm would accept $C O D$ as the terms of sale if better terms were denied, perhaps because of a poor credit rating.
5. Net 30 means that the bill is expected to be paid within 30 days of the invoice date.
6. The term $2 / 10, n / 30$ means that the customer may take a $2 \%$ discount if payment is made within 10 days of the invoice date. If the discount is not taken, payment is expected in full within 30 days.
7. The customer would see the terms of sale for a transaction on the sales invoice.
8. A manager could see the terms of sale for any customer on the customer's account in the subsidiary ledger.

## SECTION I0.5 REVIEW QUESTIONS (continued)

9. A business ensures that cash discounts are taken when available by having a designated employee check every purchase invoice to see if a discount is offered and pay the invoices with discounts within the discount period.
10. The Discounts Allowed account is associated with a sales transaction.
11. Another name for Discounts Allowed is Discount off Sales or Sales Discounts.
12. Another name for Discounts Earned is Discount off Purchases or Purchases Discounts.
13. A business would not have an account for Discounts Allowed if it does not offer cash discounts to its customers.
14. The discount is calculated on the net amount of the sale, the amount after the sales return.

The discount period would begin from the date on the latest document related to the transaction, which is the document for the sales return.
15. Discounts Allowed appears on the income statement as a deduction from Sales.
16. Discounts Earned appears on the income statement as a deduction from Purchases.

*The assumption is that the discounts are taken on pre-tax totals.

## SECTION I O.6 REVIEW QUESTIONS (page 440)

1. A common-size income statement is an income statement with amounts expressed as percentages of net sales.
2. A common-size income statement shows you how many cents each item represents for every dollar of net sales. This makes it easy to understand how different items on the income statement compare to each other.
3. When working with spreadsheet formulas, it is sometimes necessary to make the divisor an absolute cell reference so that it will not change when a formula containing the divisor is copied to a number of different cells.
4. The formula for calculating the markup percentage is: Markup Percentage $=$ Margin $\div$ Cost of Goods Sold.
5. The markup multiplier is the factor you need to increase the cost values by to reach the sales (retail) values.
6. Three ways to calculate the markup multiplier are as follows. One: Divide the Sales (in dollars) by the Cost of Goods Sold (in dollars). Two: Divide the Sales percentage (always 100\%) by the Cost of Goods Sold percentage. Three: Divide the Sales percentage (100\%) by the complement of the Margin Percentage (100\% - Margin Percentage).
$\qquad$
7. Find the complement of the margin: $100 \%-39.5 \%=60.5 \%$. If the gross margin is $39.5 \%$, the cost percentage must be its complement, $60.5 \%$.
8. Two complementary things together make up one whole. For example, the complement of $30 \%$ is $70 \%$; and together, $30 \%$ and $70 \%$ make $100 \%$.
$\qquad$

## SECTION IO.6 EXERCISES (page 440)

## Exercise I, p. 440

This is a spreadsheet exercise.
A. to C.

D. The spreadsheet should match Figure 10.22 on page 439 of the student textbook.
E. The spreadsheet should match Figure 10.23 on page 439 of the student textbook.
F., G.

When the desired margin was $49 \%$, the Total Gross Profit was $\$ 11$ 086.73. The change to 50\% added another \$452.52 to the Total Gross Profit.
$\qquad$

SECTION IO.6 EXERCISES (continued)
Exercise I, p. 440 (continued)
H. The danger of increasing the desired margin too much is that the quantity sold will drop because consumers look for cheaper alternatives. This results in lower sales volume and a lower gross profit.
I. The retail price of an inventory item will change over time because of sales and other discounts. You could adapt the spreadsheet model by adding more columns for the various retail prices and quantities sold at each level. Since the calculation will be more involved, each product should be given its own sheet that uses cell references to link to the Inventory Pricing and Values sheet.

## Exercise 2, p. 44 I

This is a spreadsheet exercise.
A.

B. When Net Sales is changed to $\$ 400$ 000, the markup multiplier increases from $184.1 \%$ to $195.0 \%$.

## SECTION IO.7 REVIEW QUESTIONS (page 445)

1. The perpetual inventory system is a system where the record of items in stock is kept up to date in detail on an ongoing basis.
2. Before the use of computers, a perpetual inventory system was recorded manually on file cards.
3. Only a few companies kept track of inventory on card files because it was very time consuming and expensive.
4. The source document for additions to inventory in a manual system is a receiving report.
5. The source document for deductions from inventory in a manual system is a shipping order.
6. Deductions from inventory after a sale in a department store are made through the point-ofsale terminal. The cashier enters the codes and quantities sold and the POS terminal automatically updates the inventory records.
7. It is not necessary to count the inventory when using a perpetual inventory system because the figures are always up to date. However, random checks of the inventory are made to ensure the merchandise had not been stolen or damaged, two reductions in inventory that the POS system cannot track. A physical count will also be done at the end of the fiscal year to ensure the accuracy of the inventory account in the ledger.
8. This is the entry for the cost portion of a sale when the perpetual inventory system is used.

|  | Dr | $C r$ |
| :---: | :---: | :---: |
| Cost of Goods Sold | $\$ \$ \$ \$$ |  |
| Merchandise Inventory |  | $\$ \$ \$ \$$ |

9. Switching from the periodic system to the perpetual inventory system adds the Cost of Goods Sold account to the general ledger and eliminates the Purchases account and the Purchases Returns and Allowances account.
10. Under both inventory systems, transportation charges are accumulated in a separate account, such as Freight-in.
11. If inventory were lost, stolen, or damaged under the perpetual inventory system, you would debit Inventory Shrinkage.

## SECTION I 0.7 EXERCISES (page 445)

## Exercise I, p. 445

A. Additions to inventory are usually made from copies of $\qquad$ receiving reports
B. $\qquad$ forces department stores to use the perpetual inventory system.
C. In a computer inventory system, each inventory item is given $\mathrm{a}(\mathrm{n})$ unique code
$\qquad$
D. The perpetual inventory system produces up-to-the-minute information that cannot be produced by the $\qquad$ periodic inventory system.

SECTION IO.7 EXERCISES (continued)
Exercise I, p. 445 (continued)
E. Deductions from store inventory are made from copies of $\qquad$ shipping orders or, more commonly, through $\qquad$ point-of-sale terminals
F. Any differences between the $\qquad$ book
$\qquad$ adjustment
$\qquad$ figures and the actual figures require a(n) $\qquad$ to the book figure.
G. Even in a computer inventory system, a(n) $\qquad$ of the stock is necessary.
H. A journal entry for a sale under the perpetual inventory system includes a debit to Cost of Goods Sold and a credit to $\qquad$ Merchandise Inventory Purchases account is not used with
I. When buying inventory, the $\qquad$ the perpetual inventory system.
J. Spoiled merchandise forces a debit to the $\qquad$ Inventory Shrinkage account.

| 31 | S.O. 931 |  |  | 20 | 11 |
|  |  |  |  |  |  |

## SECTION IO.7 EXERCISES (continued)

## Exercise 2, p. 446 (continued)

B. No. $730-0320: 14 \times \$ 16.00=\$ 224.00$

No. $713-3011: 11 \times \$ 9.40=\$ 103.40$
The cost value of item No. 730-0320 is \$224.00 and item No. 713-3011 is \$103.40.

Exercise 3, p. 447

## Merchandise Inventory

| 50000 | 6000 | (2) | (2) 6000 |
| :---: | :---: | :---: | :---: |
| (1) 10000 | 9000 | (3) | (3) 9000 |
| (4) 3000 |  |  | 15000 |
| 48000 |  |  |  |

SECTION I O.7 EXERCISES (continued) Exercise 4, p. 448
A. Note: After the first printing, the May 22 transaction total was corrected to 423.47.

## SECTION IO.8 REVIEW QUESTIONS (page 452)

1. The major expense that a merchandising business has that a service business does not is the cost of goods sold.
2. The essential difference between a merchandising business and a manufacturing business is that the merchandising business buys the goods it sells while the manufacturing business makes the goods it sells.
3. The differences in calculating the cost of goods sold for merchandising and manufacturing businesses is that merchandising business use the cost of goods purchased while manufacturing businesses have a more complex calculation to determine the cost of goods manufactured.
4. Cost accounting is a specialized area of accounting that concentrates on determining, controlling, and reporting the costs of doing business.
5. The calculation for the cost of goods manufactured is not normally shown on the income statement because it is a detailed calculation that deserves its own statement.
6. Another name for the manufacturing statement is the schedule of the cost of goods manufactured.
7. Three important costs that make up the manufacturing costs for a fiscal period are raw materials, direct labour, and factory overhead.
8. Direct labour represents the wages for those employees who have a specific role in making the finished goods. Indirect labour represents wages to workers who support the manufacturing process.
9. Goods in process are goods that have had some raw materials, direct labour, or factory overhead costs applied to them but which are not yet in their finished state.
10. Another name for goods in process is work in progress or unfinished goods.
11. To determine the cost of goods manufactured, use the formula: Cost of Goods Manufactured = Beginning Goods in Process + Total Manufacturing Costs - Ending Goods in Process.
12. Three inventory accounts that may appear on the balance sheet of a manufacturing firm are Merchandise Inventory, Raw Materials Inventory, and Goods in Process Inventory.
13. Understanding the cost of goods formula helps you with the calculation on the manufacturing statement because the two calculations are similar. The cost of goods formula uses inventory and purchases while the manufacturing statement uses the cost of goods in process and manufacturing costs.

CHAPTER 10 REVIEW EXERCISES (continued)
Exercise 2, p. 456 (continued)
GENERAL JOURNAL
PAGE

## Exercise 3, p. 456

Indicate whether each of the following statements is true or false by entering a T or an F in the space provided. Explain the reason for each F response in the space provided.
A. A wholesaler is a merchandiser. Therefore, you can say that a merchandiser is a wholesaler.
B. Some of the goods found in the inventory of a hardware store are also goods found in the inventory of a building supply store.
C. Merchandise inventory is under Prepaid Expenses on the balance sheet.
$\qquad$
D. The cost of goods sold figure normally includes the cost of goods that are lost, stolen, or broken. $\qquad$
E. The merchandise inventory of a drugstore is calculated by counting all the goods on hand and multiplying by the selling prices of the goods.
F. An item that cost $\$ 40$ and sold for $\$ 80$ has a gross profit of $50 \%$ of the selling price.
G. The difference between the selling price and the cost price of the goods for a fiscal period is also the net income figure before any operating expenses are deducted.
H. The goods not sold represent the ending inventory.
I. The goods sold at selling prices represent the revenue figure.

| $F$ |
| :---: |
| $T$ |
| $T$ |

J. The perpetual inventory system is not commonly used because of the work needed to keep track of the many items in the inventory.
K. A used car business could easily use the perpetual inventory system because the number of items in its inventory is quite small.

## CHAPTER 10 REVIEW EXERCISES (continued)

## Exercise 3, p. 456 (continued)

L. XYZ department store uses the periodic inventory system. It must take a physical inventory at least once a year.
M. A perpetual inventory results in a "calculated" inventory figure. The inventory quantities shown on a perpetual inventory listing should be checked by inspecting the inventory from time to time. This would make clear whether or not any goods had been stolen. $\qquad$
N. If the beginning inventory was 10000 units and the ending inventory was 12000 units, the business sold more units than it purchased.
O. The merchandise inventory figure can be found during the fiscal period from the Merchandise Inventory account.
P. The Purchases account is used to accumulate all purchases during the period.

| $F$ |
| :---: |
| $T$ |

Q. When a business that uses the periodic inventory system sells goods, no accounting entry is made to reduce the merchandise inventory. If it were made, the entry would debit Cost of Goods Sold and credit Merchandise Inventory. $\qquad$
R. The Freight-in account is used to accumulate all transportation charges during the fiscal period.
S. Freight-in increases cost of the goods acquired.
$F$
$T$
T. On the worksheet, the Purchases figure in the trial balance is extended to the
Income Statement section, Debit column.
U. On the worksheet, the Merchandise Inventory figure in the trial balance is
extended to the Balance Sheet section, Debit column.
V. Both the beginning and the ending inventory figures are shown on the income
statement of a merchandising company.
W. The Merchandise Inventory account is automatically adjusted by the closing entries.

| $T$ |
| :---: |
| $T$ |

X. A credit invoice is issued by the vendor and received by the buyer.
$\qquad$ taxes.

|  | Dr |  |
| :---: | :---: | :---: |
| a. Accounts Receivable | $\$ \$ \$ \$$ | Cr |
| Sales | Dr | $\$ \$ \$ \$$ |
|  | $\$ \$ \$ \$$ | Cr |
| b. Accounts Receivable |  | $\$ \$ \$ \$$ |

Z. The best match for Merchandise Inventory on a balance sheet of a manufacturing company is Raw Materials Inventory. $\qquad$

CHAPTER IO REVIEW EXERCISES (continued)

## Exercise 3, p. 456 (continued)

Explanations for $\mathbf{F}$ Responses
A. Many merchandisers, of course, sell to the public. These merchandisers are retailers, not wholesalers.
C. Merchandise Inventory is a current asset on the balance sheet.
E. Merchandise Inventory is calculated at cost.
G. The figure is called gross profit not net income. Also, items such as discounts, freight charges, and returns and allowances will affect the calculation.
J. Computer technology is making the perpetual system increasingly more common.
N. For an increase in inventory, the business purchased more than it sold.
O. During the fiscal period, the merchandise inventory figure becomes inexact when the periodic system is used. Even when the perpetual system is used, a physical count is needed to verify the accuracy of the ledger totals.
R. Freight-in is used only for the charges on transporting merchandise to the business for resale.
U. On the worksheet, the Merchandise Inventory figure in the trial balance is extended to the Income Statement section, Debit column.
$\underline{Y}$. The correct accounting entries are:

| Sales |  | Dr |
| :---: | :---: | :---: |
| Accounts Receivable | Cr |  |
| b. Sales Returns and Allowances | $\$ \$ \$ \$$ |  |
| Accounts Receivable |  | $\$ \$ \$ \$$ |

Z. Merchandise Inventory is similar to Finished Goods Inventory.

CHAPTER 10 REVIEW EXERCISES (continued)

## Exercise 5, p. 459

A.

| GREEN'S GARDEN CENTRE <br> INCOME STATEMENT <br> YEARS ENDED DECEMBER 3I, 20-I AND 20-2 |  |  |
| :---: | :---: | :---: |
|  | 20-1 | 20-2 |
| Sales | \$100 000 | \$120000 |
| Costs of Goods Sold |  |  |
| Opening Inventory | \$ 20000 | \$ 25000 |
| Purchases | 40000 | 38000 |
| Goods Available for Sale | \$ 60000 | \$ 63000 |
| Less Closing Inventory | 25000 | 22000 |
| Cost of Goods Sold | \$35000 | \$41000 |
| Gross Profit | \$ 65000 | \$ 79000 |
| Expenses | \$ 32000 | \$ 37000 |
| Net Income | \$ 33000 | \$ 42000 |

B. The net income for $20-2$ would be understated by $\$ 4000$ ( $\$ 29000$ instead of $\$ 33000$ ).
C. The net income for $20-2$ would be overstated by $\$ 4000$ ( $\$ 46000$ instead of $\$ 42000$ ).
D. The inventory on the 20-1 balance sheet would be understated by $\$ 4000$.

## Exercise 6, p. 459

A.

Quantity on hand to start
Receipts and shipments

Quantity on hand at end

| $\frac{\text { No. } 460}{32}$ | No. 911 |
| ---: | ---: |
| 25 |  |
| -8 | -5 |
| -10 | -8 |
| -2 | +40 |
| +30 | -15 |
| -15 | -12 |
| 27 | 25 |

B. $27 \times \$ 46=\$ 1242$

The inventory value for item No. 460 is $\$ 1242$.

CHAPTER 10 REVIEW EXERCISES (continued)

## Exercise 7, p. 460

Gross profit is $40 \%$ of sales. Gross profit: $\$ 103850 \times 40 \%=\$ 41540$.
Cost of Goods Sold $=$ Sales - Gross Profit.
Cost of Good Sold: $\$ 103850-\$ 41540=\$ 62310$.
Cost of goods available for sale is calculated from ledger account data (\$127 128). The
difference between cost of goods available for sale and cost of goods sold is the "cost of goods not sold", or in other words, the closing inventory.

Closing Inventory: $\$ 127128-\$ 62310=\$ 64818$.

| Deduct supplies used | -2 010 |
| Deduct inventory deduction | -3300 |
| Adjusted net income figure | \$38075 |

Name
Date

## CHAPTER 10 REVIEW EXERCISES (continued)

## Exercise 9, p. 46 I

A. a. Since inventory is lower than it should be, the cost of goods sold is higher than it should be by $\$ 10000$. This is because the overlooked inventory is assumed to be sold, which means the cost of selling is inflated.
b. The inflated and artificial cost of selling causes the gross profit to be understated by $\$ 10000$.
c. The net income also will be understated by $\$ 10000$.
d. The Merchandise Inventory account and the Capital account will both be understated by $\$ 10000$ because assets are less than what they should be, causing the owner to have a smaller claim.
B. If the inventory was overstated, the cost of goods sold would be understated by $\$ 10000$. The gross profit, net income, Merchandise Inventory account, and Capital account would all be overstated by $\$ 10000$.
C. To make the profit appear higher, you could consider inflating the ending inventory figure. This lowers the cost of goods sold and when you lower costs, profits go up.
D. To cheat on taxes, you might consider understating the ending inventory. This would result in a higher cost of goods sold figure. Increasing costs causes a lower profit on the income statement and a lower income tax bill.
E. No, your method in Part $D$ would not save tax dollars over a two-year period. If the ending inventory is understated by $\$ 50000$, the cost of goods sold will be higher in that year by $\$ 50000$. However, this ending inventory becomes the beginning inventory in the new fiscal year. Since the cost of the beginning inventory is $\$ 50000$ lower than it should be, the overall costs in the new fiscal year will wind up being $\$ 50000$ less than they would have been. This results in an overstated net income in the new fiscal year and a larger tax bill. The scheme merely postpones the payment of taxes. The owner might still be tempted to cheat because they may think other business circumstances will arise in the new year that make the postponement of taxes advantageous such as (planned purchases of new equipment, an impending labour contract with employees, etc.), but hopefully sound morals, ethics, and a desire to build a solid business reputation will prevail.

## CHAPTER 10 REVIEW EXERCISES (continued)

## Questions for Further Thought, p. 463

1. The inventories mentioned are not merchandise inventory because they are to be used and not resold. Therefore, they are not a factor in determining a figure for cost of goods sold. They represent materials used in the operation of the business and are treated in the accounts in the same way as supplies.
2. Yes, this conclusion is true. Merchandise that has been bought represents a cost to the company. If it is still on hand, it is an asset. If it is not still on hand, its cost must be included as a deduction from revenue to arrive at a correct gross profit. This is true regardless of how the inventory left the business. The cost of goods sold formula helps calculate gross profit in a straight-forward way, and this is acceptable accounting practice; however, the formula is unable to reveal the amount of inventory lost, broken, and stolen.
3. The value of merchandise listed on the balance sheet is determined by the units on hand multiplied by their cost price. The amount of Sales on the income statement is determined by the number of inventory units sold multiplied by their selling (retail) price.
4. The gross profit is shown separately on the income statement so that it is easy to see the amount of gross profit that is necessary to cover operating expenses and yield a net income. Also, the amount of gross profit can be easily converted to a percentage of sales, which gives business owners an idea of how much to mark up the cost price of their inventory items.
5. Computers constantly track levels of inventory and automate the re-ordering process. The advantages of carrying a smaller inventory are that less money is invested in inventory and the company can spend less on storage facilities. This frees up cash, reduces the need to borrow, and lowers interest charges as a result.
6. The merchandise sold is listed first as revenue at its selling price and then as the cost of goods sold at its cost price. It needs to be listed twice because the business pays a different price to buy the goods than it does to sell the goods.
7. Listing the closing inventory at its cost price is easy to calculate and gives readers of the balance sheet an objective and understandable figure to examine. When special market conditions arise, the value of inventory can be adjusted.
8. Freight-in is included in the cost of goods calculation because the cost of transporting the merchandise to the business is one of the logical costs of acquiring the merchandise.
9. A business might close down for a day or two in order to take inventory because the process of sorting and counting all the merchandise disrupts the business's normal operations. It is also difficult to count items accurately if they are being sold at the same time.
10. Businesses with a periodic inventory system take inventory even though they would rather not because it is a necessary step in determining cost of goods sold, gross profit, and net income.

## CHAPTER IO REVIEW EXERCISES (continued)

Questions for Further Thought, p. 463 (continued)
11. The method of handling the merchandise inventory on the worksheet records the opening inventory as a cost in the Income Statement, Debit column. It also records the ending inventory as a contra-cost in the Income Statement, Credit column, and as an asset in the Balance Sheet, Debit column. No adjustment is made to an existing figure; nothing is recorded in the adjustments columns.
12. Sound arguments can be made for all three major financial statements: the balance sheet, income statement, and cash flow statement. Yet, the income statement is probably of most interest to a banker because it shows the business's net income and operating expenses. If the business is making a profit and is projected to make a profit in the future, it will likely be able to cover the interest costs associated with additional bank loans.
13. The most common error made by students when doing the closing entries for a merchandising business is to forget to include the merchandise inventory figures in the closing entries.
14. The credit note got its name because it means the customer-specifically, an accounts receivable customer-is getting some type of allowance to reduce the amount owed. This means Accounts Receivable is decreasing and it does so with a credit entry not a debit entry.
15. In purchase transactions where returns and allowances are involved, there is no point in paying for a transaction until all the source documents are received and the final amount of the transaction is known.
16. Businesses that refuse to give a cash refund for returned merchandise offer a credit instead.

## Cases for Further Thought, p. 463

1. Price is not the only consideration for Paula's customers. Her business offers a wide variety of products in one place, and it obviously provides outstanding customer service.

## CASE STUDIES (page 464)

## Case I Analyzing Income Statements for Two Merchandising Companies (p. 464)

1. From looking at the sales figures, Company $A$ is likely a small company and Company $B$ is likely a large company. From looking at the building maintenance, rent, and wages figures, Company $A$ is physically smaller than Company $B$ and has less office space and fewer employees. From looking at the advertising expense, Company $B$ has a higher profile than Company $A$, which spends no money on advertising.
2. Company $B$ has higher expenses than Company $A$ but is able to earn more than twice the net income of Company A because it has a much higher amount of gross profit.

## CASE STUDIES (continued)

## Case I Analyzing Income Statements for Two Merchandising Companies (continued)

3. A. $\$ 211686 \div \$ 415072=51 \%$

For Company B, the cost of goods sold is $51 \%$ of sales.
B. Cost of Good Sold (58\% of Sales): $\$ 415072 \times 58 \%=240742$

Net income: $\$ 415072-\$ 240742-\$ 149025=\$ 25305$
Difference in Net Income: $\$ 54361-\$ 25305=\$ 29056$
Company B's net income would decrease by $\$ 29056$ if its cost of good sold was $58 \%$ of sales.

## Case 2 Why Have Gross Profits Declined? (p. 465)

1. $\$ 110000 \times 50 \%=\$ 55000$

The correct cost of goods sold figure should have been \$55000.
2. The high cost of goods sold figure is likely a result of a loss of inventory due to theft. In this situation, it seems probable that the new manager, Jonathan Yeo, is responsible for the loss.
3. Cost of Goods Sold

Beginning inventory

| $\$ 36500$ |
| ---: |
| $+\quad 67000$ |
|  |
| $\quad \$ 103500$ |

4. Piran Trewin could prevent any irregularities in the inventory by starting a system where all inventory is carefully controlled for a specific time period. Then, any losses of inventory during this time could probably be traced to a specific cause and the weakness in the system could be eliminated. Also, it may be that Jonathan Yeo is not a good man for the job and a better person should be hired to replace him. Perhaps Piran Trewin should oversee his business more closely.

## Case 3 Squeeze Play? (p. 466)

1. On the surface, Lequita is a sharp business person. She appears to be picking up easy discounts of sizable amounts. However, this might not always be to the company's advantage. Good reputations in business produce profits over the long term. Lequita's scheme will diminish goodwill with suppliers. At some point, they might respond by refusing to provide credit terms, increasing prices, delivering sub-standard materials, giving poor customer service, or complaining to the government officials who award contracts to Highway Construction.
2. No, Lequita's policy is not ethical because it is based on misrepresentation. She agrees to the supplier's terms of sale at purchase but does not honour these terms when she receives the bill. It is not illegal, she will not go to jail for it, but it will sour relations with her suppliers, which is a considerable hidden cost in the long run.

## CASE STUDIES (continued)

## Case 3 Squeeze Play? (continued)

3. $\$ 200000 \times 2 \%=\$ 4000$

The $2 \%$ discount is $\$ 4000$.
4. Whether Lequita's money-saving claim is true or false depends on how long she takes to pay the bank loan. Using the $\$ 200000$ invoice as an example, the timeframe might work like the scenario below.

- The invoice is received. Highway Construction has no intention of paying it until 100 days have lapsed.
- Highway Construction hears nothing from the supplier for the first 30 days because the invoice is not due. After 10 days of being overdue-and 40 days since the invoice was received-the supplier calls and agrees to Lequita's scheme.
- Lequita was going to wait 100 days before paying $\$ 200$ 000, but will now pay $\$ 196000$ after 40 days. This forces her to borrow $\$ 196000$ for 60 days.
- The cost of borrowing $\$ 196000$ for 60 days at $10 \%$ is $\$ 3222(\$ 196000 \times 10 \% \times 60 \div 365$ ). Therefore, Lequita's scheme saves \$778 (\$4000-\$3222).
- But, there is a good chance that Lequita might not pay the bank loan at the end of 60 days, given her poor business attitude and the business's uncertain cash flow patterns. If she holds on to the loan for 90 days, for example, she actually costs the business $\$ 833$ ( $\$ 196000 \times 10 \% \times 90 \div 365=\$ 4833$ ).

5. If I were the accountant for Highway Construction, I would inform suppliers at the time of purchase of our cash flow situation and that they will have to wait a good length of time before receiving payment, perhaps up to 90 days, but no more. This way, they can plan for the delay. If the delay is not acceptable to them, and they would prefer to decline considerable sales revenue, then that is their choice. In a competitive market, though, they likely would still be happy for the business. Business people are willing to absorb some inconveniences if they are assured that they are dealing with straightforward and honest people.

## CASE STUDIES (continued)

## Case 4: Challenge A Scheme To Save Income Tax? (p. 467)

1. Yes, Vince is correct that the net income for the two years remains the same no matter how it is calculated.
2. Yes, Vince would be guilty of tax evasion. Tax laws do not leave room for cheating on this year's tax return on the premise that extra payments will be paid at some time in the future. Yes, he is violating accounting standards. The International Financial Reporting Standards require financial statements to be relevant and reliable. Vince's valuation of inventory is misleading.
3. Yes, the scheme offers the hidden benefit of saving Vince some interest charges because he will have an extra $\$ 7000$ and will not need a bank loan in order to pay his tax bill. In essence, the government and taxpayers are lending him money free of charge.
4. The main danger of the scheme is that Vince could be charged with tax evasion, which could result in a large fine, jail time, or both. He is risking his reputation and his business. This type of scheme might also become a habit if he continues to lose in the stock market and take other financial risks, which will increase his chances of getting caught. The company accountant or a manager in charge of taking inventory is most likely to detect this scheme. Tax auditors at CRA might also notice a large drop in inventory, when compared to previous years. They would subsequently question why the extra inventory leaving the store did not produce a higher sales volume.

## career Evelin Wong, CA, CPA/Manager, Audit and Assurance Services/McGovern, Hurley, Cunningham, LLP, Toronto (page 469)

## Discussion (p. 470)

1. Evelin chose a career in accounting instead of science because of the wide range of job opportunities. As she says, every company has to deal with accounting but not every company has a science department.
2. The skills Evelin learned on the job that she did not learn in university were time management, working under pressure, communicating complex ideas, and multitasking.
3. Differences: The medium-sized firm has tighter deadlines, more complex accounting issues, and stricter reporting standards that the small accounting firm. Evelin worked alone in the small firm and in a team in the larger firm. Similarities: Both firms use the same format for the engagement forms and used the same accounting standards.
4. Positive aspects of Evelin's job are meeting interesting people, learning new things, and travelling to exotic locations. Negative aspects of Evelin's job are the long work hours, unexpected deadlines, and high levels of stress.
